**Procedure to install the last patch** *LeddarVU8 Updater 1.5*

It's important to follow this procedure until the last step

1- Connect your LeddarVU8 to your computer
2- Click on this link to download the patch files. Please note that you must register to our support portal (if you don't already have an account) to access the patch files.
3- Choose the location where you want to download the ZIP file on your computer
4- Unzip the **LeddarUpdater-1_5.zip** folder
5- A new folder **LeddarUpdater-1_5** will be created with 3 files as shown below
6- Click on the **LeddarUpdater.exe** file

7- This command window will pop-up:

8- Select the number that corresponds to your connection interface:
   o FTDI: SPI connection
   o \COMx USB connection
      ▪ Modbus address: 1
9- The update will start and the window will close automatically
10- A **.txt** file will be generated inside the **LeddarUpdater-1_5** folder
11- Please send this .txt file to support@leddartech.com. It contains the serial and the confirmation numbers that corresponds to your unit

It is crucial that LeddarTech receives this .txt file to allow us to:

- Confirm the successful installation of the patch (You will receive a confirmation email within 48 h)
- Assure the continuous technical support of your Vu8 unit.
- Send you the latest updates/patches for your unit when available.

12- Download the latest LeddarConfigurator software by clicking on this link
13- Click on the .exe file and follow the instructions to finalize the installation
14- Connect the LeddarVu8 sensor to your computer if it's not already connected
15- Open the LeddarConfigurator software and follow the update process if prompted

For any question/assistance please contact our support team at support@leddartech.com
